

FEATURED SOLUTION

Delivering Covid-19 Site Access Screening Solutions

To Protect Employee Health and Help Essential Businesses Adapt to a “New Normal”

Essential businesses, including the food production industry, shipping and logistics, and manufacturing currently face several operational challenges due to the Covid-19 outbreak. To overcome these challenges and keep production moving, they must have a strategy for efficiently accomplishing the following objectives:

- Promote and protect employee wellness
- Reduce the potential for the spread of illness
- Enable on-site health care workers to identify the need for secondary screenings
- Provide safe, timely access to the workplace for hundreds of employees per shift

Ally Energy Solutions’ Rapid, Accurate & Safe Pre-Screening Infrared Camera Technology

Ally Provides Simple Turn-Key Implementation and Support:

- Configuration
- On-Site Set Up
- Pre-Commissioning
- Training
- Delivery
- Ongoing Maintenance

With prompt turn-around times and strong supply chains, we can quickly and efficiently upgrade your US-based facility with site-screening technology.

FEATURED SOLUTION

Highly Efficient Daily Wellness Screening is Critical to Saving Both Time and Money, Now and in the Future.

With Ally Energy Solutions as a Covid-19 Site Screening Implementation Partner, Businesses Can Operate Efficiently, While Protecting Essential Workers and Avoiding the Cost and Proximity Associated with Slow, Inefficient Handheld Scanners.

At Ally Energy Solutions, we're proud to be able to use our skills in creative problem solving, device deployment, systems integration, and customer service to help our client-partners during this unprecedented time of challenge and uncertainty. Because our relationship-based approach allows us to pivot at a moment's notice, we can provide the services our clients need in real-time.

Energy Supply, Demand, Carbon and Capital™ - Ally's Suite of Services is Built on Innovative, Sustainable, Cost-Effective Efficiency - Where and When You Need It!

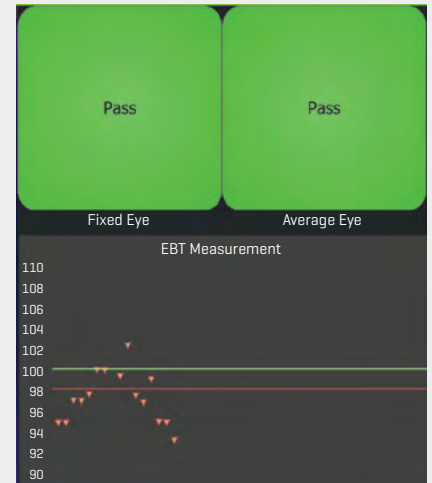

While infrared scanning technology is helpful in determining elevated temperatures in subjects and the possible need for further evaluation, this device is not a medical diagnostic tool and does not indicate whether or not an individual is sick or will be sick in the future.

Let Ally help you keep your employees healthy, safe and productive.

How it Works

Fast, Accurate, Reliable

Subject briefly pauses before a heat-sensing camera maintaining a distance of 6' between operator and subject. The camera scans the tear duct region, which is the hottest spot on the face and most closely represents the body's core temperature.

Infrared technology obtains a highly accurate internal reference temperature. The process takes mere seconds and results in confirmation of a normal temperature or a flag to proceed to a second temperature reading.
